1. The new generating station at Bogatic, 20 kilometers south of Sarajevo, has begun to operate. It is situated in the valley between the Jahorina and Treskavica mountains and obtains water power from the Zeleznica river. The water is carried from the river to the power station by a 2,400 meter conduit with a drop over that distance of 160 meters. The machinery for the power station was manufactured partly at Jesenice and partly at the railroad car works at Slavonski Brod.
2. A new hydro-electric station is being constructed at Fuzine. Water is obtained from Lic by means of a canal.
3. Construction of a new thermo-electric generating station at Varazdin is planned. This station will supply power to the new industrial quarter of the town which will be built soon.
4. Work on the construction of a factory at Obrenovac for the production of electric cables is in progress. This is one of the factories projected under the Yugoslav Five-Year Plan.
